DETAILED ACTION

1. In response to applicant's amendment filed 12/17/02, the specification has been amended. Applicant's arguments have been carefully considered and found persuasive. Claims 1-31 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 22 is rejected under 35 U.S.C. 102(b) as being anticipated by Ramdani (5,835,521). Ramdani discloses the claimed invention. Note the abstract which teaches the optoelectronic device (active VCSEL structure) on a front side of a first substrate (supporting substrate) and a resonant reflector (DBR mirror) on a front side of a second substrate (silicon substrate), the front sides being bonded together.

Allowable Subject Matter

4. Claims 1-21 are allowed.

5. Claims 23-31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The cited prior art do not teach or fairly suggest the claimed invention including along with all the other claimed features, a cladding or buffer layer positioned between

the resonant reflector and the selected top or bottom mirror, or a grating film having two or more spaced grating regions separated by one or more spaced regions, the spaced regions of the grating film having a grating film thickness that is less than the grating film thickness of the grating regions, but greater than zero.
